

e-COMMERCE WITH E-STORE/LINK

e-Store/Link can

- Accept credit card payments
- Authorize against credit cards without jumping to third party companies like Verisign
- Use your existing files and subroutines
- Take advantage of your existing accounting software and parameters
- Manage the liens and payments directly
- Run from your database directly or from the web
- Create sophisticated reports that meet your specific financial needs
- Deliver a tremendous return on investment

Online Payments
Right In Your
Own Database

e-Store/Link supports

- Secure payments and privacy
- Linux, Unix or NT-based database servers
- Terminal-oriented administration
- Web-page payments
- Options to run on as many or as few database licenses as you want
- A custom look and feel for your web pages

e-Store/Link is secure

- Secure Socket Layer (SSL) support
- Encrypted communications

e-Store/Link does *not* require

- Any applets or components to run on the browser
- Any specific browser or a certain release level of any browsers
- Prior knowledge of HTML

e-Store/Link does require

- Multi-value database with TCP/IP support
- A web server that runs on Windows, UNIX or Linux
- Knowledge of the database management system
- An ability to securely communicate between the web server and the database server
